

GREYWATER RECYCLING

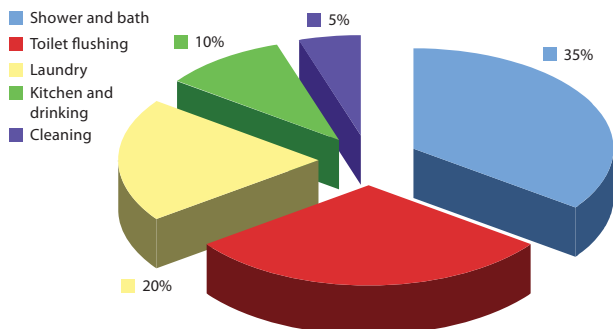

THE SOLUTION FOR WATER SHORTAGES

BRAC SYSTEMS - RGW-150

The RGW-150 is the smallest and most affordable tank that we offer. This is the perfect solution for smaller homes, condos or apartments with up to 3 people. Not only will you be saving money on your water bill, but you will also be reducing your household water consumption by up to a third, thus helping to conserve our most precious resource.

On average, a family of four uses 240,000 litres (63,408 USG) of water per year. Well over half of our water is being used to shower, bathe and do the laundry, while nearly a third is being used to flush the toilet. A mere 10% of our home water supply is used in the kitchen and as drinking water. These statistics do not include irrigation.
